

Flexi Wood Ultra Lite

PROFESSIONAL AUDIO / Hi-FI & HOME CINEMA

Description

Upgraded with a Melamine finish, Flexi Wood Ultra Lite is a panel dedicated to the control of medium and medium-low frequencies, now with anti-scratch resistance. It acts simultaneously as an absorber and a reflector, controlling excess energy in a room without compromising its ambience. This helps to create listening spaces with a natural, bright sound.

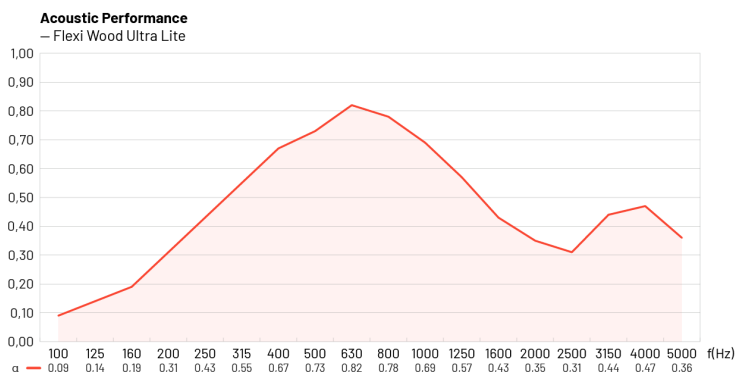

The panel's revolutionary design is further enhanced by the addition of a wood surface. Long known for its excellent acoustic properties, the wood also adds elegance and modernity to the panel, making it suitable for use in any type of space.

The Flexi Wood panel is available in two different thicknesses for use in different frequency ranges. Flexi Wood Ultra Lite is designed to perform to maximum effect between 400 and 1250 Hz.

Applications

Listening Rooms, Home Theaters, Recording and Broadcast Studios, Post Production Studios, Office, Rehearsal Rooms, Conference and Teleconference Rooms, Auditoriums, etc.
