

FireHawk® G4

FireHawk G4's arrival brings improvements in uniformity, off-axis viewing, and the reduction of artifacts inherent in all ambient light rejecting screens

FireHawk G4 is a flexible front projection screen surface engineered for use with today's high-powered projection technology in applications involving the presence of ambient light. Ambient light is the enemy of two-piece projection. Screens designed to reject ambient light can be effective at furnishing an image in even the brightest of rooms, but the trade-off is the presence of unwanted artifacts such as color-shift, hot-spotting, and poor off-axis viewing. Stewart Filmscreen is in the business of image fidelity, and FireHawk was designed to provide the best possible trade-off between image fidelity and ambient light resistance. With improvements to uniformity and off-axis viewing, G4 brings FireHawk even closer to the reference quality and image fidelity that have long been synonymous with Stewart Filmscreen.

FEATURES:

- 1.1 Gain with 35 degree Half-Gain
- Best-in-class uniformity
- Completely opaque material
- Reduced hot-spotting and virtual elimination of "speckle" effect
- Reduced color-shift in off-axis viewing

Stewart's proprietary spray technology allows for the placement of particles at a microscopic level

Material Type	Flexible Front Projection
Gain	1.1
Half Gain	35 degrees
Minimum Throw Distance	1.5 x image width
Ambient Light Front Reflectance Value	27% per foot candle
Ambient Light Resistance	Excellent performance in ambient light
Lay Flat Quality	Excellent
Flame Resistance	Yes
Optional Sound Perforations	Microperf X2
Maximum Size	Contact factory
Seamless	Yes
Size Limitations	8' x 90' - Seamless
Screen Models	Fixed, retractable, variable masking

What do we mean by "4k+"? Stewart Filmscreen has created the 4k+ symbol to represent this screen as being "4k (and more) ready". For years, Stewart screens have been used in aerospace and other applications dealing in line pair resolution well in advance of 4k. NOTE: ALL STEWART SCREENS ARE CAPABLE OF HANDLING THIS RESOLUTION. However, not all screens are optimal for applications for which you would consider a 4k projector. Therefore, we have created this logo to help you easily identify which screens should be considered for such applications.
